

Amitrol 240

One Product With So Many Options

Got problem weeds like Narrow-leaved
Hawksbeard, Dandelion, and Field Horsetail?
Post-harvest Amitrol with or without glyphosate
offers great control of these weeds.

Post-Harvest or Chem-Fallow

- Controls tough weeds like:
 - Canada thistle
 - Cattails
 - Dandelion
 - Field horsetail
 - Leafy spurge
 - Perennial sow-thistle
 - Quackgrass
 - Toadflax

Pre-Seed Burndown

- Apply with up to 0.5 L/acre glyphosate
- Use 5 gal/acre water
- Spray 0 to 1 day prior to seeding wheat, barley or canola
- Spray 5 to 7 day prior to seeding peas
- Spray 6 to 14 days prior to seeding soybeans
- Spray 10 to 14 days prior to seeding corn or white beans

Fits Your Operation

Group 11 MOA
Choose flexible weed control this fall and choose your crop later
Apply when weeds are actively growing
Offers flexible crop options after pre-seed / post-harvest application

SPECIFIC USE INSTRUCTIONS

- Apply in 50-200 L/ha of water (5-20 Gal/ac)
 - Use larger volumes of water if needed to obtain good coverage
 - Apply to small actively growing weeds
 - Avoid using higher rates on coarse soils with low organic matter
 - Do not allow livestock to graze treated foliage
 - Do not apply if rain is expected within 3 hours
 - Do not allow workers to enter the field within 12 hours of application
- Contact Univar: 1-844-963-8967

YOU'RE INDEPENDENT. NOT ALONE.®
